SHORELINE PROTECTION

A "BOULDER" LOOK AND STYLE

Reti-Rock walls are a beautiful way to protect and accent any waterfront property. The massive strength of a 2,500 lb. Reti-Rock block is ready to protect your freshwater shorelines from whatever nature may throw at them. All Reti-Rock shore protection products are specified with 4000 psi wet cast concrete, which allows the wall to withstand the pressures that shoreline applications generate.

AVAILABLE FACE STYLES: Limestone and Cobblestone

TOP BLOCK LIMESTONE

Weight: 1225 lbs.
46" x 28" x 18" High
5.75 sq. ft. of face

MIDDLE BLOCK LIMESTONE

Weight: 2400 lbs.
46" x 41" x 18" High
5.75 sq. ft. of face

BOTTOM BLOCK COBBLESTONE

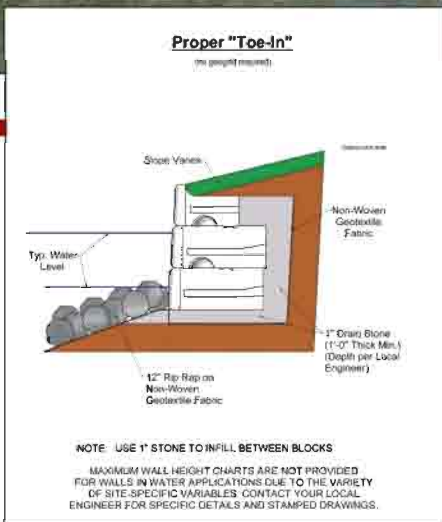

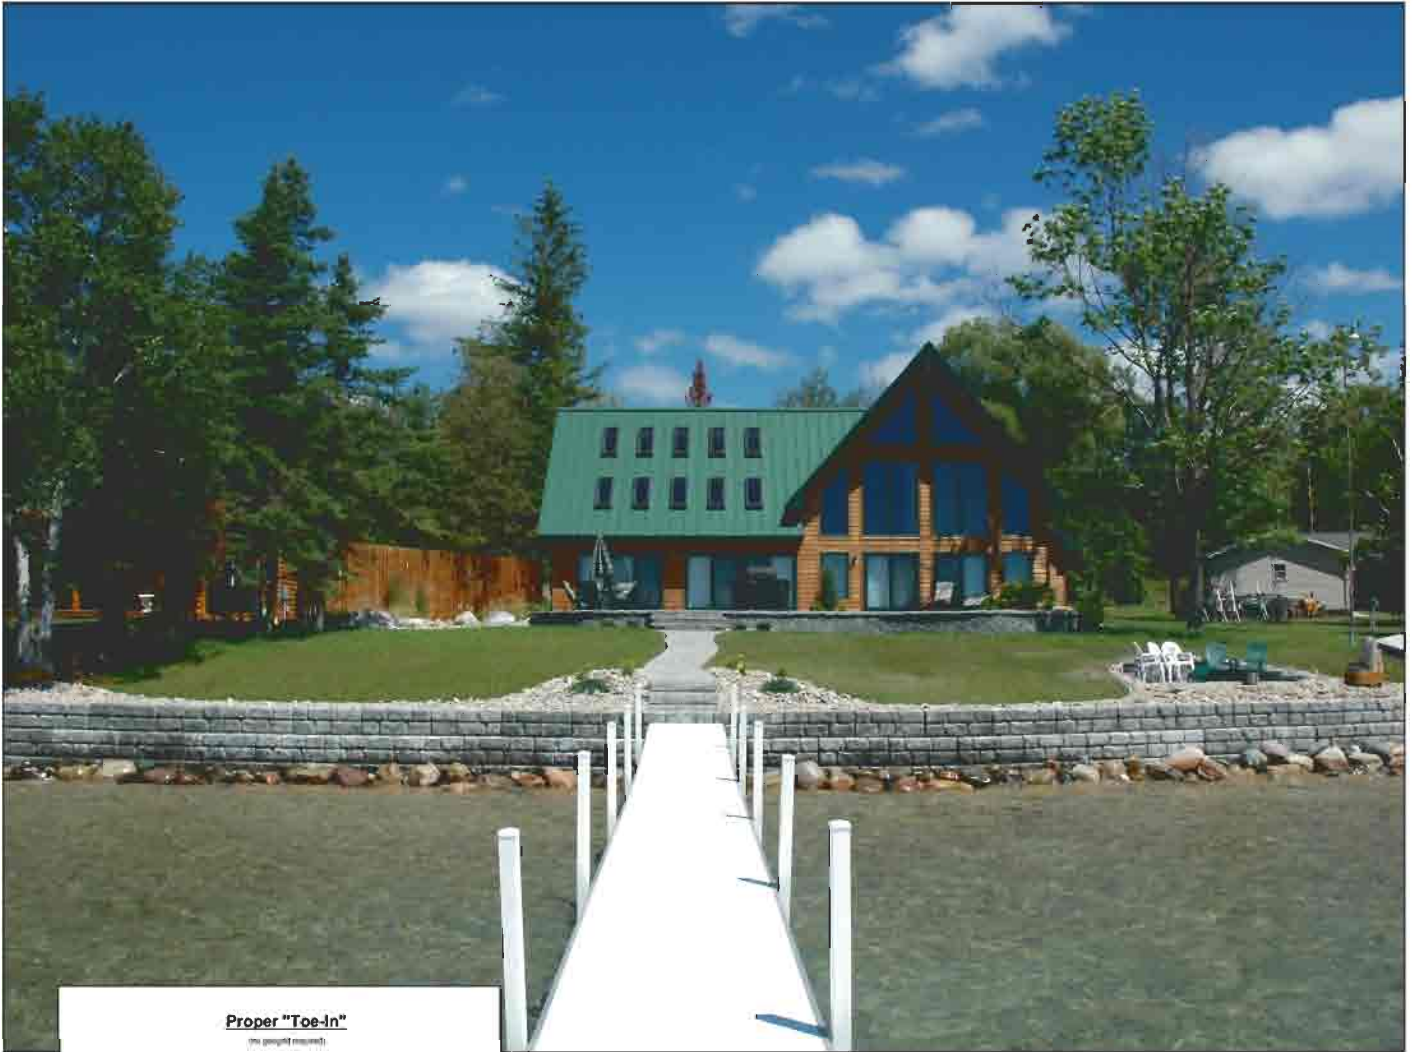

Weight: 2500 lbs.
46" x 41" x 18" High
5.75 sq. ft. of face

Reti-Rock is the first block to utilize the American Philosophy of "Bigger is Better." With this idea in mind, Reti-Rock created a retaining wall system using blocks weighing up to 2500 lbs. The massive scale of the system allows walls to be built up to 75% higher than other retaining wall systems without using expensive geo-grid or tiebacks, making Reti-Rock the block for your retaining wall application.

“THE ESSENCE OF NATURAL ROCK”

REDI-ROCK'S MASSIVE INTERLOCKING BLOCKS ARE SET WITH MACHINES, REDUCING LABOR COSTS AND INSTALLATION TIME.

SHORELINE PROTECTION

A TOUCH OF CLASS

The strength of Redi-Rock's precast blocks gradually increase over time. Other materials can deteriorate, experience greater creep and stress relaxation, lose strength and/or deflect. The durability of Redi-Rock blocks offers a virtually maintenance-free structure that provides exceptional service for years to come.

Redi-Rock blocks are cast with concrete that is nontoxic, environmentally safe and made from all-natural materials, eliminating the possibility of soil contamination. The Redi-Rock System is available with optional planter blocks, creating *green walls* that provide ample room for indigenous plant life to grow and flourish. Engineered backfill material provides ideal drainage conditions and soil erosion prevention.
